

Ioannis Vettas

Aspiring Web Developer | Full Stack

Athens, GR | +30 6983587762 | johnvettas7@gmail.com | [LinkedIn](#) | [GitHub Portfolio](#) | [Personal Website](#)

Computer Science student at the University of Piraeus, Department of Digital Systems, with experience in full-stack development and technologies such as HTML, CSS, JavaScript, Node.js, Java, Python, and cloud services.

AREAS OF EXPERTISE

HTML • CSS • JavaScript • TypeScript • React • JSON • XML • Java • Python • C • C++ • Docker • Containerization • Kubernetes • CI/CD • NoSQL • MongoDB • SQL • Mysql • Pandas • NumPy • TensorFlow • Linux • BigData • Hadoop • Spark • Cybersecurity • Secure Programming • AI and Machine Learning • Problem Solving • Customer Service

WEB RELATED PROJECTS

ds_dynamic_schedule – Dynamic schedule for my University Department, Powered with AI Pipelines

- Built an AI-powered web application that dynamically converts unstructured PDF text into Markdown using vision-based Markdown conversion model from LlamaCloud
- Gemini-2.5-flash converts markdown to JSON to be used for handling data.
- Fully working server-side backend made with Node.js technologies such as express, multer, bcrypt, cookie-parser and others

Weather App project – Small personal web app with user authentication services

- Using OpenWeather APIs, I made an app where users could search for any city and mark it as a favorite to view the weather.
- Users could securely create accounts, which were then securely saved in MongoDB along with their selected favorite cities.

EDUCATION

• University Of Piraeus Department of Digital Systems

I am currently a student at the University of Piraeus with a GPA of 7.9 and all courses passed up until the sixth semester. Projected study period 2023-2027. Labs and assignments:

- Developed a Java application using IntelliJ IDEA, leveraging XAMPP for local server management and MySQL for relational database architecture.
- Executed Exploratory Data Analysis and developed optimized machine learning models including regression and classification using Pandas, NumPy, and Scikit-Learn to derive insights from real-world datasets.

• Stockholm University Department of Computer and Systems Sciences

I took part in a student exchange program where I studied one semester in Stockholm, took 6 courses and passed all of them. Study period 2025-2026. Labs and assignments:

- Engineered an Edge AI solution using TensorFlow Lite for Microcontrollers to deploy a sound classification model on an Arduino based UAV for real-time animal species identification.
- Performed security hardening on a vulnerable website to mitigate threats and conducted authorized security assessments on platforms to identify remaining vulnerabilities.

• ECPE Michigan Proficiency

I obtained the University of Michigan ECPE (C2 level) in 2020

SEMINARS, CERTIFICATIONS AND COMPETITIONS

IEEEEXTREME Programming Competition • NTUA HACK • HACK'N'LEARN • Big Data Analytics and Web Development with AI • Cisco's Introduction to Cybersecurity
